Pennsylvania to Allow Retired Health Care Professionals to Bolster COVID-19 Response

Harrisburg, PA – Pennsylvania is acting to enable retired health care professionals to assist with the COVID-19 response by waiving certain licensing regulations.

Previously, the Department of State [waived some regulations for nurses](#), removed [barriers for pharmacies to provide services](#), and announced that in-state and out-of-state health care practitioners can treat patients via [telemedicine during the coronavirus emergency](#).

“Many retired and inactive health care professionals want to help bolster our health care system during this crisis,” Secretary of State Kathy Boockvar said. “This action will allow people with inactive or retired licenses in good standing to reactivate their licenses and immediately lend their assistance in this challenging time. We thank these retirees for their willingness to serve.”

The Department of State’s Bureau of Professional and Occupational Affairs (BPOA) requested, and Governor Wolf granted, suspensions of several regulations related to the state boards of Medicine, Osteopathic Medicine, Nursing and Pharmacy for the duration of the coronavirus emergency. A previous suspension allows for [retired nurse-midwife license reactivations](#).

These new regulation suspensions increase the number of available and qualified health care practitioners in Pennsylvania by allowing retired practitioners to re-enter their field more easily without paying reactivation fees:

- State **Board of Medicine** licensees who are in active/retired status for less than four years can apply for reactivation of their license. Their continuing education (CE) requirements and license reactivation fees will be suspended. This measure allows these practitioners’ licenses to become active unrestricted until Dec. 31, 2020. If a licensee wishes to continue practicing beyond Dec. 31, 2020, the licensee will need to renew the active-unrestricted license and meet all current requirements at that time.
- **Medical Doctors (MDs)** and certain allied health professionals integral to providing care during this state of emergency, whose licenses are expired/inactive for less than four years, may apply for reactivation of their licenses. Their CE requirements and license reactivation fees will be suspended. This measure allows retired/inactive **MDs, physician assistants, respiratory therapists and perfusionists** to become active until December 31, 2020.
- State **Board of Osteopathic Medicine** licensees who are in active/retired status for less than four years can apply for reactivation of their licenses. Their CE requirements and license reactivation fees will be suspended. This measure allows

retired/inactive **Doctors of Osteopathic Medicine (DOs)** to become active unrestricted until Oct. 31, 2020. If a licensee wishes to continue practicing beyond that date, the licensee would need to renew the active-unrestricted license and meet all current requirements at that time.

- **DOs** and certain allied health professionals integral to providing care during this state of emergency, whose licenses are expired/inactive for less than four years, can apply for reactivation of their licenses. Their CE requirements and license reactivation fees will be suspended. This measure, which applies to retired/inactive **DOs, physician assistants, respiratory therapists and perfusionists**, allows those individuals to become active until October 31, 2020.
- **Registered Nurses (RNs), Clinical Nurse Specialists (CNSs), and Certified Registered Nurse Practitioners (CRNPs)** whose licenses are expired/inactive for less than five years can apply for reactivation of their licenses. Their CE requirements and license reactivation fees will be suspended.
- **Pharmacists** whose licenses are expired/inactive for less than four years can apply for reactivation of their licenses. Their CE requirements and license reactivation fees will be suspended.

Last week, BPOA announced that in-state and out-of-state health care practitioners can treat patients via [telemedicine during the coronavirus](#) emergency.

The Department of State is working with the governor's office, the Department of Health and the Department of Human Services to [identify regulations and requirements](#) that can be suspended to give medical providers and facilities the flexibility they need to respond to COVID-19. The Department of State website will be updated regularly as additional requirement suspension information becomes available.
